Bottom-Mount Door Bracket

Undermount Door Bracket

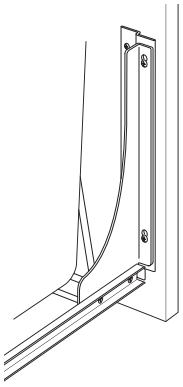

Door-Mount Bracket Kits

- Door-Mount Bracket design allows for application with most common cabinet door overlays
- Eliminates need for sub-panel support behind cabinet door

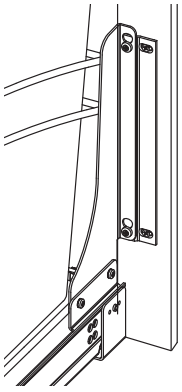

EASY INSTALLATION

All Door-Mount Bracket Kits have six-way adjustability for alignment of cabinet door with easy "drop-in" keyhole attachment (Undermount Door Bracket shown).

Bottom-Mount Door Bracket

Undermount Door Bracket

Stock #	Description	Finish	Units per Carton	Weight per Carton
UNDERMOUNT DOOR BRACKET KITS				
UDMKT-1.5-1-C	1-1/2" Face Frame Width	Anochrome	1	2 lbs. [0.9 kg.]

Polymer Sink Front Trays (with stops)

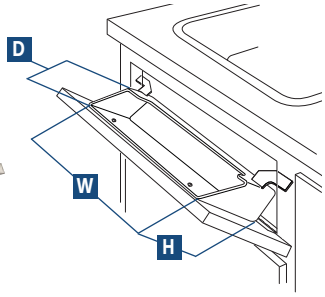

- Designed for use with standard self-closing hinges (not included) used on most cabinetry
- For use with faceframe or frameless (Euro-style) cabinetry
- Built-in stop prevents items from tipping out

Specialty Sink Front Trays

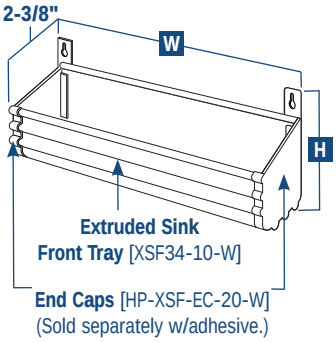

- Extruded Sink Front Tray (cut-to-fit 34" or 72" widths):
  – For faceframe or frameless (Euro-style) cabinetry
  – Use with Scissor or Euro-Tray Hinges (see page 46)
  – Easy-to-clean, durable white PVC
- Drop-in Soap Tray fits most sink front tray models (excluding 1-5/8" deep trays)

HSR15-W

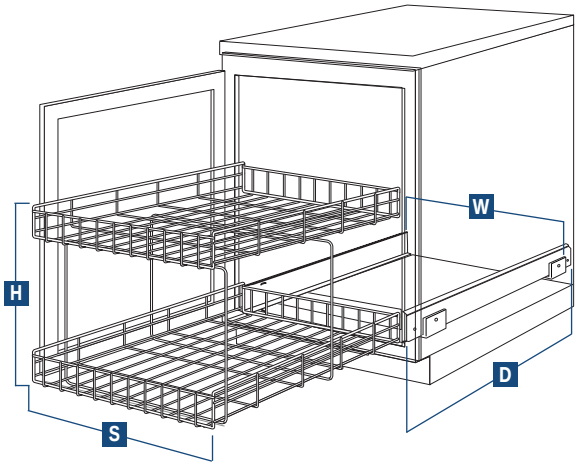

Half-Shelf Roll-Out

- Allows for storage without removing the half-shelf commonly found in base cabinets
- Two heavy-gauge wire baskets straddle the half-shelf to provide maximum storage

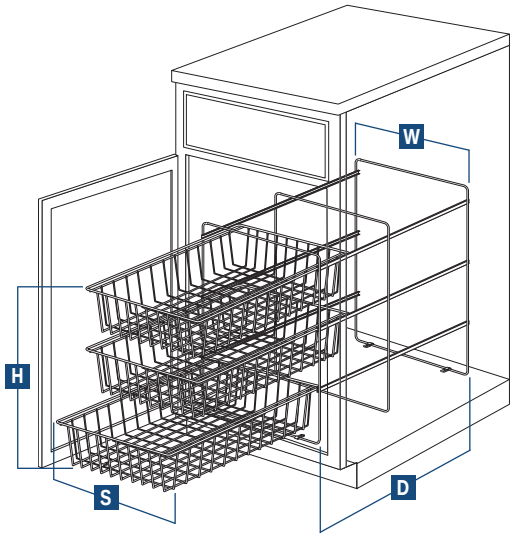

VBA14-3-W

Vegetable Bin Assembly

- Baskets are ideal for storing vegetables, as well as linens or toys and slide-out on coated steel channels
- Self-contained three-tier basket system comes fully assembled

BC020E-W with BP6-W

Base Cabinet Organizer

- Features six vertical Side-Mount Basket positions (Side-Mount Baskets sold separately. See page 59. BCO20E-W has two vertical basket positions.)
- 75 lb. class rated, bi-directional slides are non-handed

Base Cabinet Organizer
(BCO2456-W shown)

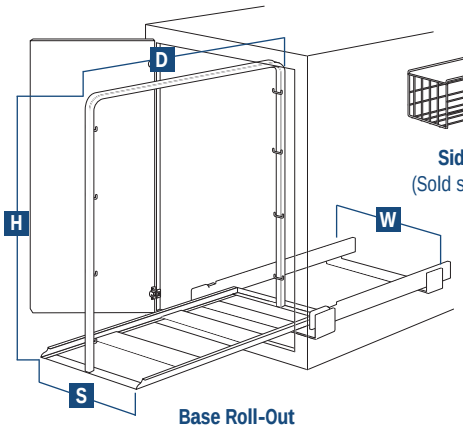

Side-Mount Baskets
(Sold seperately. See pg. 59)

B1700-W with BP4-W and BP6-W

Base Roll-Out

- Four Side-Mount Basket positions per side (Side-Mount Baskets sold separately. See page 59.)
- Features four vertical basket positions

Base Roll-Out
(B1700-W shown)

Side-Mount Baskets
(Sold seperately. See pg. 59)

See page 90 - 91 for recommended Closet Planning information.

Closet Planning

All closets are essentially custom projects, because individual storage needs differ. However, there are some elements that all closets have in common.

There are two basic types of closets: walk-in and reach-in. Walk-in closets typically are found in the master bedroom suite. They vary in size and shape depending on the home layout. Typical shapes of walk-ins include square, rectangle, square notch and L-shaped. Reach-in closets are typically found in children/guest bedrooms, or along hallways, and are rectangle-shaped.

Walk-In Closet

There are no standard dimensions for the walk-in closet, but there are general guidelines that are essential in planning a closet in this format. You will need a minimum of 2 feet of space for the closet door. Pocket doors are recommended to give the most unrestricted access to clothing. When planning overall dimensions, the minimal path through the closet should be approximately 30 inches. The overall width should be a minimum 6 feet, 6 inches to allow for hanging space on both walls.

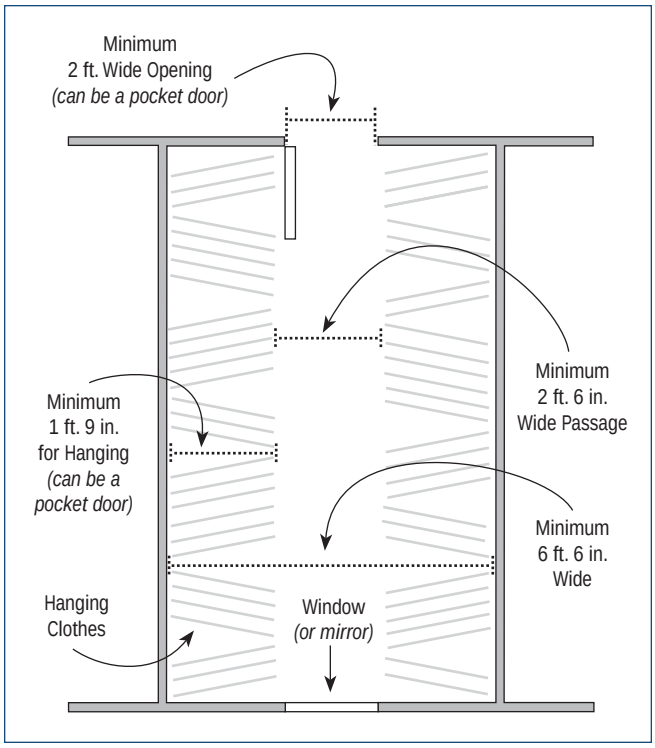

It is helpful to think of the walk-in as a combination of reach-in closets. Measure each wall separately. Plan storage one wall at a time using corner shelving or hang rods to make the most of the space. If the closet is shared, plan one wall for each person with the back wall shared or used by the person who needs more space.

Reach-In Closet

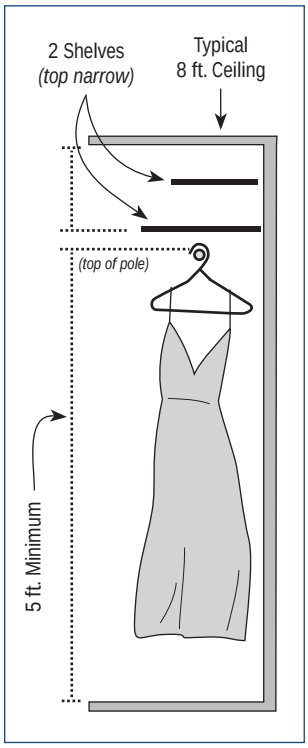

Reach-in closets are typically long rectangles measuring 48 inches long and larger. A typical reach-in closet is approximately 6 feet long, 8 feet high, 24 inches deep with an 80-inch-high door opening. Reach-in closets are very practical for a single occupant. They allow for easy viewing and access of all contents. Accessories and baskets work well in them.

For a reach-in closet with bi-fold doors, it's best to place a basket section in the center of the closet for maximum accessibility. For a closet with sliding doors, put the baskets on either end of the closet.

Double Pole

Closet Planning

Space Planning

Take inventory of what you will store in the closet area. The amount and types of clothing are essential information for proper planning. Below are general dimensions required by different types of clothing. Keep in mind that storage needs can change and flexibility is essential in designing a closet.

Women's

Dress.....68" long
Robe.....52" long
Jacket.....36" long
Blouse (on hanger).....34" long
Blouse (folded).....10" wide, 13" long
Skirt.....36" long
Shoes.....6" wide, 9-1/2" long
Sweater (folded).....10" wide, 14" long

Men's

Suit Coats.....12" wide, 38" long
Shirts (six on hangers).....12" wide, 38" long
Shirt (folded).....8" wide, 14" long
Pants (straight on hanger).....44" long
Pants (folded on hanger).....27" long
Dress Hat.....6" x 11"
Shoes.....9" wide, 12" long
Boots.....9" wide, 12" long

Hanging Items

Short hanging items, such as skirts, blouses and pants, fold over hangers and therefore require rods attached 30 to 40 inches from the floor. A typical closet can include two levels of hanging rods. As a rule, place the top rod 80 to 82 inches up from the floor, the bottom rod about 40 inches up.

For a single rod application, plan 60 inches from the floor for placement. You will need at least 1 foot, 9 inches (24 inches is standard) away from the back wall for hanging. When spanning an opening of more than 48 inches, consider adding a center support to the closet rod for added stability. The same general rules apply to kids' closets. For young children who don't have a lot of hanging items, plan on one rod at 36 to 40 inches off the floor. This allows youngsters to reach their clothes.

Helpful Hints

- Maximize space. Few people own many items that require a 64-inch high rod. Dedicate a smaller space between 1 foot and 2 feet for these items. All other clothing can be hung in a double-rod application, thereby allowing more in a smaller space.
- Design for visibility. Plan the closet so socks, ties and underwear can be viewed when dressing.
- Beware of cedar. Cedar closets do keep moths away, but the cedar scent can permeate adjacent spaces. Plan for a cedar closet in the basement or with an extra door.
- Think about lighting. You need to be able to see clothes to make decisions when getting dressed. Overhead natural light is preferred but if it is not available, good fluorescent lighting is often the only code-compliant solution.
- Use the vertical dimension. Take advantage of all available space, up to the ceiling and down to the floor. Bins on high shelves, roll-out boxes that sit on the floor, even a third pull-down closet rod if your ceiling is over 9 feet, are ideal for storing items that aren't frequently used.

Rectangular Liners

T-Shaped Liners

Range Hood Liners

Knape & Vogt® offers a Custom Liner Program to help protect the beauty and craftsmanship of unique wood hoods and offer a solution in a timely manner to help complete projects on time. Contact your local KV® representative or distributor for ordering information, or contact Knape and Vogt™ at 1.800.253.1561 for a distributor near you. Please allow approximately four weeks for delivery on custom liners once drawings and pricing are approved by the customer. Liners are available for use with KV® ventilation products only and come in a variety of finishes: white, biscuit, black, silver metallic, stainless steel (w/clear protective coating).

Questions & Answers

What does CFM stand for?

Cubic Feet per Minute, which is the standard for measuring the rate of air flow, or air movement.

What is a sone?

Technically, a sone is a subjective unit of loudness as perceived by a person with normal hearing. A sone is equal to the loudness of a pure tone having a frequency of 1,000 hertz at 40 decibels. A decibel is a unit used to express relative difference in power or intensity, usually between two acoustic or electric signals, equal to ten times the common logarithm of the ratio of the two levels. Sones are the standard units of measure used in the kitchen ventilation industry. KV® includes both sone and decibel ratings in ventilation product specifications.

What is the advantage of HVI and UL/C-UL certified products?

HVI stands for the Home Ventilating Institute. This organization sets the industry standard on all home ventilation in kitchens, baths, heating, and air-conditioning. The HVI tests products using a standardized procedure and certifies in writing the test results of noise levels (sones) and air movement (CFM). Only companies that have submitted products for testing are allowed to use the HVI-certified logo on products, advertising and literature. C-UL is the Canadian equivalent of the UL certification for safety in the United States on all electrical products. No product can be sold or installed in Canada without this certification.

Are range hood liners required?

Yes. Liners are necessary to protect the quality of the wood hood finish from grease build-up. They make cleaning easier, and act as a fire 'block' in the event of a cooktop fire. If you have a custom hood where a stock liner does not fit, a liner can be custom fit by Knape & Vogt™ through our custom liner program.

How should ventilation be ducted?

Ideally, ventilation should be ducted to exit outdoors. If using a ductless conversion kit, ventilation may be ducted back into the kitchen or to a room that is not a living space, such as a utility room or garage. Airflow and cooking odors will concentrate where air is ducted. Therefore, when determining the position of a range in a kitchen design, consider where the ducting will exit in order to prevent buildup of cooking odors.

How much CFM will I need for my range?

Divide the total BTUs by 100. This will give you the CFM needed. This is just a rule of thumb. The level of cooking activity, and how many of those BTUs may be in use at the same time is something to consider as well.

What is the minimum distance needed between the range and the ventilation blower?

Check with your local building and fire code regulations for proper dimensions. A minimum of 24" on electric ranges and 30" on gas ranges is common in many areas.

How often do the filters need to be changed with the KV® ventilation products?

KV® blowers from Fujioh have aluminum slot filters that are easily cleaned and re-used.

What will be needed if the ventilation is ducted back into the house?

A ductless conversion kit (CONKIT-ECON or CONKIT-350) will be needed. This includes a charcoal filter, which will need to be replaced from time to time depending on the amount and type of cooking done.

Lifetime Limited Warranty

Knape & Vogt® products have been recognized as world-wide leaders for their innovative design and quality construction. Our exclusive Limited Lifetime Warranty means that your Knape & Vogt®products are covered against defects in materials and workmanship. If a problem occurs with your Knape & Vogt® product as a result of normal use, contact Knape & Vogt® directly. This warranty is limited to providing a replacement product.

Worldwide Distribution

Knape & Vogt® brings more than a century of experience to the design, manufacture and distribution of functional hardware, storage-related components, and ergonomic products for original equipment manufacturers, specialty distributors, office furniture dealers, hardware chains and major home centers throughout the United States and the world. Contact your local representative for more details regarding our worldwide distribution network.

Meets or Exceeds Industry Standards

Knape & Vogt® manufactured products are held to high industry standards, including those established by BIFMA (Business and Institutional Manufacturers Association), BHMA (Builders Hardware Manufacturers Association) and KCMA (Kitchen Cabinet Manufacturers Association). Contact your local representative for more details on how these standards apply to yourKnape & Vogt® product of interest.
